DOZER

BRUSH RAKE

Direct Blade
Attach Style

The Brush Rake is designed for Crawlers and Dozers for typical land clearing operations. It is used to pile brush and debris, leaving the soil and dirt behind, to permit clean burn and cleanup.

The multi-tine design installs in place of the dozer blade on the C-frame and works like a rake by gathering loose roots, stumps, brush, etc. and allowing the soil and dirt to pass through it.

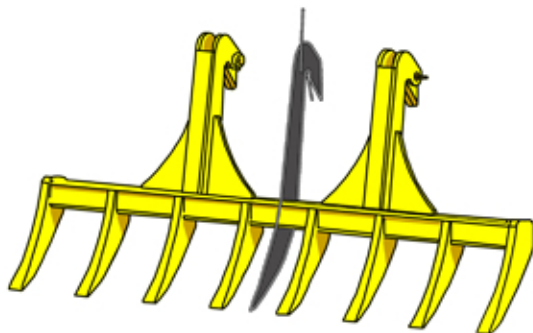

FEATURES AND BENEFITS:

- Multi-tine design with a curved profile to promote brush collection
- Replaces blade with C-frame hook-up design
- Various widths to match machine size and application
- Piles brush without retaining soil for clean brush pile burning
- Increases machine utilization over manual labor

STANDARD SPECIFICATIONS:

- T-100 (A-514) steel tines
- Replaceable teeth tips
- C-frame hook-up
